QUESTION: DigitalGuideOnline marketingOnline salesExcel file won't open The Excel spreadsheet application is an essential tool in many workplaces. Excel files often contain important company data or customer information. The Microsoft application can then be used to easily manage and analyze this data. When an Excel file won't open, you need a quick and effective solution. This problem can have different causes. In many cases, the file itself is corrupted. Other times, the problem occurs because the file extension is incorrect or the file is open in another program. In this article, we'll show you troubleshooting methods for the most common causes of this problem.\$1 Domain NamesRegister great TLDs for less than \$1 for the first year. Why wait? Grab your favorite domain name today! Matching emailSSL certificate\$247/365 supportThe most common reason for this problem: Excel won't open a file because the file is corrupted. This is especially common if Excel crashes while saving the file, or if a problematic macro prevents the file from being saved correctly. When this happens, the file is often so damaged that you can no longer open it with Excel by double-clicking the file in the File Explorer. In some cases, the solution is simple:Open a blank document in Excel.Select the File tab and click on "Open..." to see a list of recently opened files. Alternatively, you can use the Excel keyboard shortcut Ctrl+O to open a file. If the file is corrupted, you will be asked whether you want to repair the file or just extract data. First try to repair the file. If that doesn't work, you can use the "Extract Data" option to recover data from the file or you can try to recover the Excel file.Corrupted Excel files can be immediately repaired upon opening.Excel has two different native file formats. The original XLS format was used until Excel 2003. Since then, Microsoft has introduced a new XML-based file format with the extension XLXS. The two formats are not directly compatible with each other. When third-party programs save an Excel format file, they sometimes use the wrong extension. In that case, trying renaming the extension of the problem file from XLS to XLXS or vice versa. Then try to open the file in Excel again.An incorrect file extension can be the reason why an Excel file won't open.Just like other Windows programs, Excel often has problems opening files on external drives. In theory, Windows allows you to open any file, whether it's on an internal hard drive, a USB drive, or a network drive. However, difficulties often arise when opening files on external drives. If you encounter this problem, try copying the file to an internal hard drive and opening it from there first.Problematic add-ins In Excel can prevent files that use their functions from opening. If this problem causes Excel to stop working, start the program in Safe Mode. Disable the add-ins, restart the software and open the file.If you double-click an Excel file in the File Explorer and a blank worksheet appears instead of the file you selected, do the following:On the File tab, select "Options". On the next screen, click "Advanced" on the left.Scroll down to the "General" section and disable the option "Ignore other applications that use Dynamic Data Exchange (DDE)". Choose "OK" to confirm the changes. Now try to open the file again.If the problem persists, you may need to delete the problematic add-in. To do this, go to the File tab, click "Options", and then click "Add-Ins". Under the "Manage:" dropdown menu, select "Excel Add-Ins". Click "Go...". In the dialog box that opens, uncheck the add-in(s) under "Other options" and click "OK". Always use this app to open XLS/XLXS files. You click "OK". Excel will be used to open Excel files in future.Windows 10 gives you easy ways to choose the application you want to open a file with.If an Excel spreadsheet is not displayed correctly when it opens, especially if it contains graphics, the problem is often caused by graphics acceleration. You can disable this feature as follows:Click "File" on the ribbon.Choose "Options". In the next window, choose "Advanced". Scroll down to the Display section and select the "Disable hardware graphics acceleration" checkbox.Click "OK" and then restart Excel.Excel is often more prone to file problems thanother programs that support the same file formats. If a file won't open in Excel, try switching to another spreadsheet application. In many cases, the LibreOffice or OpenOfficespreadsheet programs will open corrupted Excel files. If you save the file in these applications, you can often continue editing the file in Excel itself.Another option is to upload the Excel file to Google Sheets, a browser-based spreadsheet. This application can also handle minor errors in files. With Google Sheets, you can edit the table right in your browser or download it as an XLSX file. To use Google Sheets, you must be signed in to your browser with a Google Account.Related articles Excel shortcuts enable you to carry out your work a lot faster, but you first have to learn them. We present you with 30 useful Excel key combinations that facilitate your daily work. From navigation, to inserting cells, to calculating totals, if there isn't already a shortcut for a function you regularly use, you can easily create your own Excel shortcuts. There are many Excel functions and formulas that are useful for a wide range of tasks. They can help you make your workflows easier and more efficient. We'll introduce you to the most important ones here, and you'll be on your way to being an Excel expert in no time at all.If you're having trouble opening an Excel file, there could be several reasons why it's not working. As a Microsoft Office user, you've no doubt experienced this issue before. Excel freezes and suddenly stops responding for a number of reasons. These can include problematic add-ins or other issues that are not caused by Excel itself, such as printer settings or issues with antivirus software. We'll show you how you can easily fix this problem yourself. Support Communities / iPhone / Using iPhone Looks like no one's replied in a while. To start the conversation again, simply ask a new question. Question: Q: This started recently, but couldn't remember exactly when. my iOS is constantly being updated as the new one comes out this problem also doesn't occur all the time, certain time i could view it, but other times i couldn't (email from same person). It will give me this page - I've attached a screenshot of it. Any idea how to fix it? Issue: Q: 12 Posted on Jun 23, 2021 2:24 AM Reply I have this question too (2) I have this question too Me too (2) Me too Page content loaded Jun 24, 2021 7:44 AM in response to thesia in response to thesia Hello thesia,Thank you for using Apple Support Communities! It sounds like you're having a problem opening Excel spreadsheets after updating. We would be happy to help!We recommend checking that the app does not have an update available by following these steps: How to manually update apps on your Apple device. If you're having a problem with a third-party application we also recommend uninstalling and reinstalling the application. Check out the following support article, which provides some troubleshooting steps to try for this behavior: Delete apps on your iPhone, iPad, and iPod touch Try these steps and if you continue to have problems specifically with Excel, you may have to delete the application completely and then re-install it. Please let us know if you need further assistance. Thank you for using Apple Support Communities! We hope this helps! I downloaded Outlook App, and I can open the same document that I couldn't open in Mail App.So my alternative solution is now to view excel files in the Outlook App, but to read other emails in the Mail App.I hope Apple can look into this issue. Jun 30, 2021 6:58 PM Reply Helpful Thread reply - more options Jul 4, 2021 11:48 AM in response to thesia in response to thesia thesia We recommend trying to deleting the mail app and downloading it from the App Store.
